

Empowering Employees to Defend Against Phishing Threats

Human error remains one of the leading causes of data breaches, and untrained employees can become your organization's most vulnerable entry point. A single click on a phishing email can compromise sensitive data and damage your reputation.

CampusGuard's Phishing Simulator helps turn that risk into resilience:

- **Realistic Simulations:** Sends customized phishing emails that mimic real-world attacks.
- **Behavioral Tracking:** Monitors who opens, clicks, or responds to simulated messages.
- **Instant Feedback & Training:** Provides immediate education to users who fall for the simulation, reinforcing awareness at the moment of impact.
- **Manager Insights:** Delivers detailed reports on user behavior, risk levels, and progress over time.

This proactive approach transforms phishing awareness into a measurable, ongoing process, helping your team stay alert, informed, and secure.

Key Features

Custom Analytics & Reporting Dashboard

Access campaign summaries and metrics on click rates, credential entries, reporting rates, and overall risk scores.

Continued Awareness

Improve awareness with customized emails and landing pages, cyber awareness videos, or supplemental training.

Extensive Library of Email Templates

Use pre-built phishing templates or create your own. Test users on various attack methods, including phishing, spear phishing, trackable QR codes, and credential harvesting.

Targeted User Groups

Send targeted emails to identified employee groups, based on their role or identified risk score.

Custom Campaign Creation

Schedule simulations across the entire organization or specific departments. Select the difficulty levels (basic spammy emails vs. advanced spear phishing).

Report Phishing

Gmail/Office 365 mail client plug-in for targeted users to report phishing emails with a phishing report dashboard to view and investigate reported emails.
