CYBERSECURITY
BINGO

How many of the following words do you know?

Score 1 point for each definition you know. Add up your correct answers, and check your score below.

PHISHING	**BRUTE FORCE**	**ENCRYPTION**	**BIOMETRICS**	**CRIMEWARE**
e-mails that appear to originate from a trusted source	attack method involving an exhaustive procedure that	encoding a message or information in such a way that	use of physical characteristics of users to determine	malware used by cyber criminals to infect systems for financial gain

IDS (INTRUSION DETECTION SYSTEM)	**BOTNET**	**PATCH**	**MALWARE**	**SEPARATION** OF DUTIES
gathers and analyzes information to identify possible security breaches	a large number of compromised computers that are used to create and send spam or viruses	update released by a software vendor to fix bugs in existing programs	software that appears to be usefull, but actually gains unauthorized access to system resources	splitting privileges among multiple individuals or systems

VIRUS	**AUTHORIZATION**	**CAMPUSGUARD®**	**DICTIONARY** ATTACK	**RANSOMWARE**
hidden, self-replicating malicious software that infects other programs	the approval, permission, or empowerment for someone or something to do		attack that tries all of the phrases or words in a dictionary, trying to crack a password or key	forcing a victim to pay a ransom to decrypt compromised files and regain access

DUMPSTER DIVING	**MASQUERADE** ATTACK	**SNIFFER**	**WAR DRIVING**	**KEY LOGGER**
searching through discarded media for sensitive information	attack in which one system entity illegitimately poses as another	a tool that monitors network traffic as it is received in a network interface	process of traveling around looking for wireless access point signals that can be used to gain network access	Software or hardware that tracks keystrokes and keyboard inputs

WORM	**SQL INJECTION**	**PASSWORD**	**ZERO DAY**	**IDENTITY THEFT**
computer program that can run independently and propagate itself onto other hosts on a network	SQL code is inserted into application queries to manipulate a database	passcode used to confirm the identity of a user	the day a new vulnerability is made known, no patch is available yet	deliberate use of someone else's identity, often for financial advantage

How did you do?

Scores:

CyberSadness
1-10: You have heard of cybersecurity, right? You could definitely brush up your skills a bit. We know you can do it!

CyberCharmer
11-20: You speak fluent cybersecurity, but have room to learn more. We're definitely impressed, though!

CyberNinja
21-25: You have an impressive portfolio of cybersecurity knowledge. You may be the nerd of your friend group, but you're the least likely to get hacked. Congratulations!
